

Showersave® boosts performance of Housing Association development

Project Overview:

The Sidings, Wrexham.

A Gower Homes development of 47 properties

Gower Homes specified Showersave® as a replacement to MVHR because the system

achieves the same benefits in SAP as MVHR, but for a third of the installed price. This has assisted Gower Homes in improving the profitability per plot, with the greater confidence delivered by the reliability of Showersave®.

“We specified Showersave® because it is the most cost effective brand within the field of Waste Water Heat Recovery, and we have the confidence that the system will deliver long term performance and reliability”

Paul Woollam, Gower Homes

“What we like about Showersave® is that it is so simple to install. We have now used it on a number of sites with great success”

Chris Jones, Total Boilers

Benefits:

- Low capex and a hugely competitive £ per point in SAP
- Offers developer a cheaper alternative to MVHR, Solar PV or Triple glazing
- Showersave remains one of the most cost effective solutions to achieve the new demands of Part L 2013
- Showersave is around 60% efficient, depending on flow rate
- Customers benefit from reduced heating costs
- Zero issues with Showersave, post installation on units installed
- [Showersave®](#) is a “fit and forget” technology
